

# SHIFT LEFT & SHIFT RIGHT APPROACH

Software development has undergone a dramatic shift since the broadscale adoption of 'AGILE' & 'DEVOPS' practices. Collaboration amongst the Development, Testing & Security team has become paramount. While Agile focuses on a 'Shift Left' Approach - DevOps takes on both the Shift Left and Shift Right practices.

## SHIFT LEFT

Shift Left ->

Test Early & Often ->

Prevention & Mitigation ->

Hence Leftward flow in the Development Phase.

### Objectives:

- Continuous testing & Automation
- Improved Quality & Design
- Adherence to Timelines
- Cost-saving & better ROI

## SHIFT RIGHT

Hence rightward flow on Project Phases

<-Prepare for Unexplored & Unidentified

<- Test in Production

<- **Shift Right**

### Objectives:

- Improved customer experience
- Better Scope for Automation
- Testing in a Real environment for Wider Coverage & better user understanding
